WELCOME TO LIBRAN SURGICAL

WE CONSTANTLY INVEST IN TEAM QUALIFICATION AND OUR STRUCTURE AND FACILITIES

Our team is composed by a group of qualified professionals engaged in our organizational culture, starting with the Board of Directors, formed by experienced executives with vast experience in the health sector, as well as the commercial team, constantly trained and prepared to always present the best solutions, with the operational support of the back office, an integrated logistics and its own surgical instrumentation team. The concern with the improvement of the team is constant. In addition to all training, internal and external, we are present at the main national and international events in the health sector.

Attentive and committed to the quality of the materials and the service we offer to our customers, we have as a premise transparency in all departments of the company. In order to have the alignment of what LIBRAN Surgical expects and what it delivers from end to end in all spheres, we have a code of ethics based on: Legality, Transparency, Work Environment and Labor Relations, Privileged Information, Company Assets, Individual Advantages, Commitment to Quality, Competitions, Bids, Negotiations, Contracts, Payments, Accounting, Communication Channels, Incident Reporting, and Compliance.

PROVIDING SOLUTIONS THAT PROMOTE A SUSTAINABLE HEALTH.

CONSTANTLY INNOVATING IN THE PROVISION OF SERVICES TO PROVIDE THE BEST EXPERIENCE TO OUR CUSTOMERS.

WE ARE ASSOCIATED WITH THE MAIN LEGITIMATING BODIES OF ETHICAL PRINCIPLES AND LAWFUL PRACTICES IN THE HEALTH SECTOR, AN ASSOCIATION COMMITTED TO PROMOTE AN ETHICAL BUSINESS CULTURE THAT ENABLES THE CREATION OF ENVIRONMENTS GOVERNED BY FAIR COMPETITION AND TRANSPARENCY, AS WELL AS FOSTERING RESPONSIBLE AND PARTICIPATIVE SOCIAL ACTION OF ALL ACTORS OF THE SEGMENT.

VALUE

Ethic:

We work with transparency and responsibility.

Commitment:

We encourage attitudes to achieve the goals according to the company's strategic vision.

Quality:

We are focused on the quality of our actions and excellence in the services provided.

Sustainability:

We care for sustainable and responsible use of available resources.

QUALITY POLICY

LIBRAN Surgical, in its commitment to life, continually seeks the improvement of its services, seeking to identify and meet the customer needs. In order to achieve its quality goals, LIBRAN Surgical according to the company's strategic vision. works in partnership with suppliers studying & looking for new technologies, training and qualifying its employees, always focusing on the effectiveness of the Quality Management System and adopting strict controls of regulatory technical norms of the sector.

LARYNGOSCOPES

(Anesthesia Instruments)

LARYNGOSCOPES ► To treat some problems in the vocal cords or throat

A DIRECT LARYNGOSCOPY ALLOWS VISUALIZATION OF THE LARYNX AND IS OFTEN USED DURING GENERAL ANESTHESIA, SURGICAL PROCEDURES AROUND THE LARYNX, AND RESUSCITATION. THIS TOOL IS USEFUL IN MULTIPLE HOSPITAL SETTINGS, FROM THE EMERGENCY DEPARTMENT TO THE INTENSIVE CARE UNIT AND THE OPERATING ROOM.

We are being engaged in the Manufacturing and Exporting of the TOP QUALITY following Laryngoscope Blades and Laryngoscope Battery Handles since 1995. We have a team of efficient personnel who sternly check the Raw Materials before final procurement. Thus, we ensure a qualitative array of products at customer's end.

OTOSCOPES

OVERVIEW.

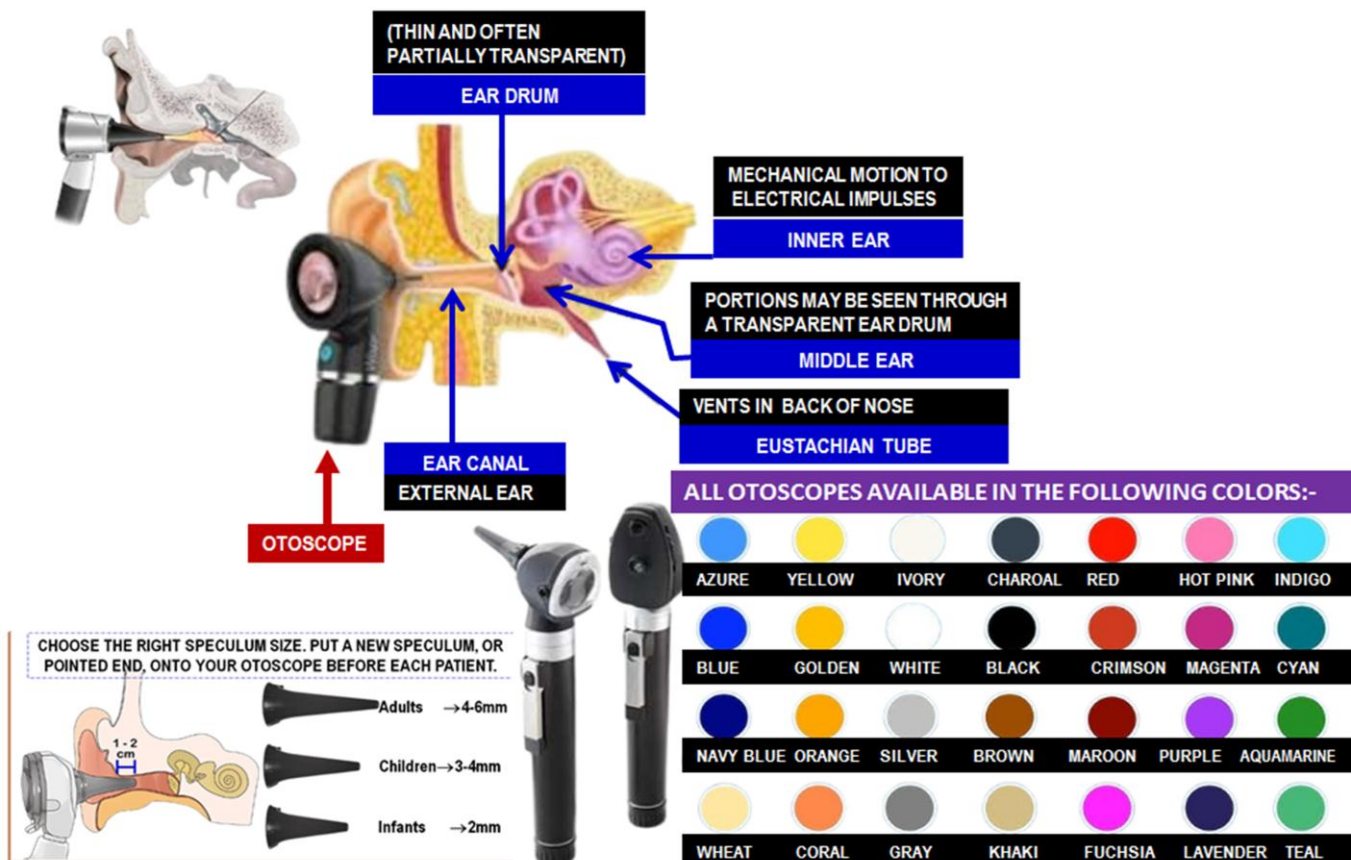

- (a). An otoscope is a tool which shines a beam of light to help visualize and examine the condition of the ear canal and eardrum. Examining the ear can reveal the cause of symptoms such as an earache, the ear feeling full, or hearing loss.
- (b). The otoscope is a valuable tool beyond its primary role as an examination tool for detecting ear problems. It can also be used for transillumination, dermatologic observation, examination of the eye and body orifices other than the ear, as a pump, as a light source, in veterinary medicine, and in non-medical tasks.

The first modern otoscope was developed by Wilhelm Kramer, a renowned German otologist in the 19th century. His otoscope was made of steel and had a funnel end.

The pneumatic otoscope has a pneumatic (diagnostic) head, which contains a lens, an enclosed light source, and a nipple for attaching a rubber bulb and tubing. By gently squeezing and releasing the bulb in rapid succession, the degree of eardrum mobility in response to positive and negative pressure can be observed.

Otoscopes may be categorized in one of three types: 1) pocket, 2) full-size, and 3) video. Pocket otoscopes were intentionally designed to fit in a pocket and are lighter and less bulky than other otoscopes. When purchasing a pocket otoscope, both the head and the handle are included.

The largest speculum that comfortably fits within the external auditory canal should be chosen when examining the ear. This permits optimal visualisation and illumination. The adult external auditory meatus is about 7 mm in diameter. Therefore, otoscopy should be performed through a speculum of similar size.

ENT SURGICAL INSTRUMENT OTOSCOPE

- ▶ Oscopes are intended for inspection of the external ear canal and eardrum under magnification using an external illumination source.
- ▶ Contraindications for use
- ▶ There is no contraindication that has direct connection with the endoscope till now.
- ▶ Do not attempt to steam autoclave sterilize any endoscope not marked "autoclave" as this may damage the endoscope or render it unusable.
- ▶ It is not recommended to use multiple sterilizations, because it may reduce the performance of the instruments.

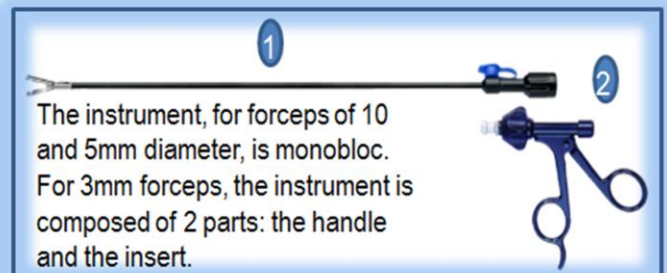

STERILIZATION METHOD	PRODUCT CATEGORY	TEMPERATURE	THE MINIMUM TIME	PRESSURE
Gravity Displacement Autoclave	Endoscope, instrument	121°C	30 Min	102.9 Kpa
Pre Vacuum Process	Endoscope, instrument	132~134°C	4 Min	205.8 Kpa

STORAGE:

- ◆ Endoscopes should be put in specialized box after each use.
- ◆ Do not overlap each other when storing. And endoscopes should be stored in clean and dry environment which the relative humidity not exceeding 80%, with good ventilation, and protected from rat, fire, insects and corrosive air.
- ◆ Temperature: -18°C to 60°C.

Though only half and year ago, **LIBRAN SURGICAL** had decided to cope with the manufacturing of Orthopedic Instruments. **LIBRAN SURGICAL**, with the help of its well experienced, Skilled Engineers and Workers, successfully achieved the Target on producing high quality Instruments.

At **LIBRAN SURGICAL**, we prioritize the use of TOP-QUALITY RAW MATERIALS to ensure the durability and reliability of our instruments. Our precision-engineered designs guarantee optimal performance during Orthopedic procedures. With our focus on quality, we strive to meet the highest industry standards.

SPENCER STITCH SCISSORS ARE STITCH-CUTTING SCISSORS OR SUTURE

Spencer Stitch Scissors are stitch-cutting scissors or suture scissors for removing sutures or stitches. Spencer Stitch Scissors have a relatively short, straight, and narrow blades. The tips of Spencer stitch scissors are blunt rather than sharp to minimize the risk of accidentally puncturing or damaging underlying tissues while cutting sutures. One blade is notched to provide improved grip and traction when cutting through sutures, preventing slippage and ensuring clean cuts of just the suture. The ring handles give you a firm, comfortable grip for precision control. They come in a variety of lengths, from 9.0 cm to 13.25 cm. Shorter handles typically offer more control, and longer handles give you greater reach. These Spencer Stitch Scissors are manufactured from surgical grade stainless steel or premium German steel, both of which are autoclavable. WPI recommends properly cleaning all your surgical instruments promptly after use. This improves the useable lifespan of your surgical tools.

FEATURES:

- ▶ Stich removal Scissors.
- ▶ 9.0cm – 13.25cm Long.
- ▶ Straight, Blunt tips.
- ▶ Notched Blade for a sure grip of the suture to cut.
- ▶ Surgical Grade Stainless Steel of Japan or German Stainless Steel.

PLASTER CAST(CUTTING) SCISSORS(SHEARS) **(ORTHOPAEDIC INSTRUMENTS)**

Plaster Cast Scissors are a vital tool in medical settings. Designed for the precise and efficient removal of plaster casts. These scissors are constructed from high-grade stainless steel - ensuring they can withstand the demands of frequent, heavy-duty use in hospitals, clinics, and orthopaedic practices. With a sharp, strong blade and an ergonomic handle design, the Brun's scissors are a go-to for professionals seeking durability, comfort, and precision.

Purpose-Built for Plaster Cast Removal

Plaster casts are commonly used to immobilize broken bones, and their removal requires specialized tools that can easily cut through the thick material without causing harm to the patient. The Plaster Cast Scissors are expertly crafted for this purpose. Their sharp, strong blades provide clean cuts through tough plaster, while the design of the scissors ensures the user maintains full control during the process, allowing for a safe and efficient cast removal.

Key Features

- **High-Grade Stainless Steel:** The blades of the Brun's scissors are made from premium stainless steel, giving them the strength and durability needed to handle frequent use. Stainless steel is also resistant to corrosion, ensuring the scissors maintain their quality over time, even in high-demand environments.
- **Ergonomic Handle Design:** Designed with user comfort in mind, the Brun's scissors feature ergonomically shaped handles that reduce hand strain, making it easier for medical professionals to use them over extended periods. The handle provides a comfortable grip, enabling steady control during precision work.
- **Sharp and Durable Blades:** The sharp, heavy-duty blades are engineered to cut through plaster casts with ease. Their durable design ensures they maintain their sharpness even after repeated use, making them a reliable tool for any medical professional.
- **20cm Length for Control and Precision:** Measuring 20cm (8 inches) in length, these scissors offer an optimal size for balancing control and cutting power. The length ensures that healthcare professionals can perform their tasks with both accuracy and efficiency.
- **Specialized for Plaster Cast Removal:** While these scissors can be used for various cutting tasks in medical settings, they are particularly suited for plaster cast removal. The specialised design ensures that the blades cut through tough materials like plaster without slipping, allowing for a smooth and controlled removal process.

Perfect for Use in Various Medical Environments

The Brun's Plaster Cast Scissors are versatile and suitable for use in a variety of medical environments, including:

Hospitals: Medical professionals in hospitals rely on durable tools that can withstand repeated use. The Brun's scissors are ideal for hospitals due to their strength and precision.

Orthopaedic Clinics: Orthopaedic practitioners often need to remove plaster casts from patients who are recovering from broken bones. These scissors provide the control and precision needed to ensure safe cast removal.

Private Practices: General practitioners and other medical professionals who perform cast removals in private practices will benefit from the reliable performance of the Brun's scissors.

Built to Last

One of the key benefits of the Bruns Plaster Cast Scissors is their long-lasting performance. The stainless-steel construction ensures they will not rust or degrade over time, even with frequent sterilization and cleaning. The sharpness of the blades is maintained even after numerous uses, making these scissors a long-term investment for any healthcare professional. Their robust construction also means they can handle more than just cast removal; they are versatile enough for other cutting tasks that require precision and strength.

Safe and Efficient Cast Removal

Safety is always a top priority when removing a plaster cast, and the Bruns scissors are designed to minimize any risk to the patient. The sharp blades provide a smooth, controlled cut, reducing the likelihood of slips or accidents. The ergonomic handles also ensure that the user has full control over the cutting process, enhancing safety for both the practitioner and the patient. Whether used in a busy hospital setting or a quieter clinic, the Bruns scissors deliver the performance and reliability needed for effective cast removal.

Plaster Cast Scissors - Bruns are a trusted tool for healthcare professionals who need to remove plaster casts safely and efficiently. Their stainless-steel construction, ergonomic design, and sharp blades make them the perfect choice for any medical environment. Built to last and designed for precision, these scissors provide excellent performance.
